

Division – Repeated subtraction

$$161 \div 7 = 23$$

- First, draw a number line ending at 161.
- Then subtract multiples of 7 to find how many there are in 161.
- 161 subtract 70 (which is 10×7) equals 91. 91 subtract 70 (which is 10×7) equals 21. 21 subtract 21 (which is 3×7) equals 0.
- Finally, add up how many 7s there are in 161. There are 23.
- So 161 divided by 7 equals 23.
